## Emerson Gains MCERTS Approval for Rosemount Analytical pH Analysers

*Approval applies to analysers used for pH monitoring in England & Wales.*

Emerson Process Management has gained UK MCERTS approval for its Rosemount Analytical range of pH analysers and sensors, which are used to monitor process conditions and discharges to rivers, smaller watercourses and the sea in England and Wales. The certificates were issued by Sira who operate the MCERTS scheme in England and Wales on behalf of the Environment Agency. The approvals cover any combination of Rosemount Analytical Xmt, 54e, 1055 and 5081 transmitters with 399, 399VP and 381+, sensors. These products have been tested and found to comply with the Environment Agency's performance standards for continuous

water on-line analysers. Emerson Process Management is currently the only company to have successfully obtained MCERTS approval for pH analysers and sensors, and this involved working closely with the Environment Agency throughout the process. Businesses that make emissions to air, land and water are regulated by the Environment Agency under strict European, English and Welsh laws, to protect the environment and human health. Permits are issued to enable companies to operate and this normally requires emissions to be monitored to ensure they meet the necessary quality standards.

## Stop press!

Would you please pass on this important information to your site representative responsible for dealing with the Environment Agency.

Thank you.
